

One job for AI

Use one real task from your week. Keep private customer details off this sheet.

1. The task

What keeps coming back to you? Name one task.

2. A useful result

What should the finished work look like? Who needs it?

3. The facts it needs

Which approved records or instructions should it use?

4. The limits

What may it do? What must wait for a person to say yes?

5. The person who checks

Who will check the result? What would make them send it back?

6. The first small test

Choose a sample task. Note the time, errors and changes before wider use.
